EDUCATION

BS Computer Science
Information Technology
University (ITU), Lahore

TECHNICAL SKILLS

Frontend

- React, Vite, TypeScript
- Tailwind CSS, Framer Motion
- Zustand (state management)

Backend

- Node.js, Express
- Layered architecture (Routes → Controllers → Services → Repositories)
- JWT authentication & RBAC

Databases

- MongoDB
- SQLite / better-sqlite3

Mobile

- Flutter

Cloud & Tooling

- Vercel, Render
- Cloudinary (media storage)
- Git & structured GitHub deployment workflows
- CloudFlare

PROFILE

Computer Science student and full-stack developer building production web and mobile applications end-to-end — from database schema and API design through to polished, responsive UI. Comfortable owning a project independently: architecture, offline-first data handling, authentication/RBAC, and deployment. Currently building an enterprise offline-first restaurant POS system and a two-sided home-services marketplace with a companion Flutter app, alongside freelance client sites.

PROJECTS

Karigar PK — Home Services Marketplace

React/Vite · Node/Express · MongoDB · Flutter · Cloudinary · Vercel/Render

- Two-sided marketplace connecting households in Lahore with verified skilled workers, built across web and a companion Flutter mobile app
- Designed the full data model, media storage pipeline (Cloudinary), and a structured GitHub-based deployment workflow
- Diagnosed and resolved a Flutter GlobalKey/StatefulShellRoute navigation crash and improved cold-start performance
- Submitted to the Punjab Youth Innovation & Incubation Competition 2026 with a full pitch deck, business plan, and working prototype

Enterprise Restaurant POS & Billing System

React · TypeScript · Zustand · Tailwind · Express · SQLite (better-sqlite3)

- Building an offline-first POS with a layered backend (Routes → Controllers → Services → Repositories), a custom SQLite migration system, and transactional order snapshots
- Designing the Dashboard, Order History, Cashier & Shift Management, and a Business Intelligence reporting suite covering sales, products, categories, and kitchen performance
- Built for a real client restaurant (Dubai Food & Restaurant, Chowk Azam) with a custom-configured 6AM–6AM business day

WhatsApp-Integrated Food Ordering Website

React/Vite · Node/Express · MongoDB

- Client project for a restaurant in Chowk Azam, routing incoming orders through WhatsApp for order confirmation and dispatch

Dubaid Foods

Customer/Admin architecture · WhatsApp rider coordination

- Food ordering platform built and operated for his own small business, with a simplified two-role architecture and WhatsApp-based rider coordination

Shaheen Badminton Tournament Platform

React/Vite · Node/Express · MongoDB

- Tournament management site with public-facing pages, a password-protected admin panel, and a custom bracket-generation engine

WORK EXPERIENCE

Freelance Full-Stack Web Developer

Self-employed · Remote / Lahore

- Delivered full-stack websites for local businesses end-to-end — requirements, design, development, and deployment
- Built a WhatsApp-integrated food ordering website and a professional digital menu for restaurant client Dubai Food & Pizza Hut (Chowk Azam)
- Built a tournament management platform with a bracket-generation engine for Shaheen Badminton Club
- Produced a demo homepage for a bakery business as a client pitch

Sales Supervisor & Affiliate Marketing Associate (Remote)

Technoant

- Supervised remote sales and affiliate marketing operations, managing client communication and lead generation through LinkedIn campaigns
- Applied content and SEO strategy to improve reach, using engagement metrics to guide iteration
